Concept of Operations Overview

Greensea software systems provide comprehensive payload management, vehicle control, and navigation for ROV operations. Visualization and the operator interface is provided by the Balefire Workspace. The workspace simplifies interactions between the operator and the vehicle. Articles in the CONOPS folder — about topics such as navigation, coordinate frames, vehicle control, and autopilots — will give an understanding of how your system is designed to be used and how operators can get the most out of it.
