

Install LCM on Windows

Place the standard LCM distribution in a directory.

Start Visual Studio then open Visual Studio Solution file in lcm-1.1.2/WinSpecific.

Configure Visual Studio for a 'Release' build then build the solution. You will get warnings but it should compile fine.

Install the files to:

lcm-1.1.2/lcm/eventlog.h lcm-cpp.hpp lcm.h lcm-cpp-impl.hpp lcm_coretypes.h
to C:\msvc2010-libs\lcm-1.1.2\include\lcm

lcm-1.1.2/WinSpecific/include/inttypes.h stdint.h to C:\msvc2010-libs\lcm-1.1.2\include

lcm-1.1.2/WinSpecific/Release/lcm.dll to C:\msvc2010-libs\lcm-1.1.2\lib

lcm-1.1.2/WinSpecific/Release/*.exe to C:\msvc2010-libs\lcm-1.1.2\lib
