Where Does My Application Binary Store?

Greensea Application Directory

The application binary is stored in the directory */usr/sbin*. Contact Greensea for the name of the application binary on your Remote system. Navigating into this directory and listing its contents will display all applications currently installed on the disk including any application configuration scripts. Here is an example of the application listing. Note that bltn and bltnconfig are Greensea's Navigation application and configuration directory.

Any programs named:

/cm_ * are device interface applications that bridge hardware devices to Greensea's communication architecture. Once you are logged into Remote, navigate to the application directory and list its contents.

```
{mailto:root@remote:}{root@remote:}> cd /usr/sbin
```

```
[{{mailto:root@remote}}{root@remote}:/usr/sbin> ls -l ./}]
```
